

ABOUT

My name is Diego. I specialize in mathematics and computer science at New York University. I love learning about how to use math in combination with computer science to build unique algorithms to solve a myriad of problems or to gain more insight. For example, mathematical modeling to better understand physical phenomena.

My hobbies include playing piano, digital sculpting, and drawing.

PROJECTS

magneticfield-gl

A 3D magnetic field visualizer made with an OpenGL backend. Implements lighting and vectors to show the direction and strength of the field at different cartesian coordinates. Field strength is also contingent on the object shape and material just like in real life. Also implements a 3D camera for user control.
